

Autopilot Parking

Model S helps you find a parking spot and automatically parks in it. In the city, it will notify you when it finds a parallel parking spot, then control steering, acceleration and deceleration to back smoothly into it. When approaching a Supercharger station, Model S automatically parks in an open stall. Model S will even park itself in your garage at home.

With calendar syncing enabled, Model S checks current traffic conditions to determine how much time is needed to make your first meeting of the day. At the right time, it turns on the climate control and opens the garage door. On private property, Model S will even pull out of the garage and meet you at the curb.
