

Update Succeeded - What's New in Release v6.0

With this release, we are now offering you an enhanced navigation system that incorporates real-time traffic, and a new Calendar app that allows you to view and navigate to events from your phone's calendar. This update also further extends the Model S intelligent driving experience with location-based Smart Air Suspension. Additional features include new power management options and the ability to personalize the name of your car.

The Calendar app requires the use of the latest Tesla Mobile App, available for Android and iOS phones.

- **Traffic-based Navigation**
- **Other Maps/Navigation Improvements**
- **Calendar**
- **New Power Management Options**
- **Location-Based Smart Air Suspension**
- **Custom Car Name**
- **Additional Improvements**

Traffic-Based Navigation (BETA)

Routing

The Model S navigation system now takes real-time traffic conditions into account when determining your route, and estimated travel times are adjusted to reflect traffic. This feature will also continuously monitor traffic while navigating, and re-route if warranted. To make this feature as good as it can be, we may collect information about the direction, location, and speed of our customers' vehicles, and share it with a partner.
