

# TESLA

## Destination Charging

With a range of 265 miles and access to a free Supercharger network stretching across North America, Tesla owners are bringing back the road trip. Attract them to your business by installing a Tesla High Power Wall Connector. With less than half the charge time of most public charging stations and a native Tesla connector, Tesla owners will arrive confident that they can quickly top up while staying with you.

- More than twice the power of typical charging stations (80A – 240V)
- Guests stopping for a few hours can quickly recharge
- Valet can charge several cars overnight
- Good looking, weatherproof design

If your hotel, resort or other destination would like to attract Tesla owners, please contact us at [destinationcharging@teslamotors.com](mailto:destinationcharging@teslamotors.com) to get started.

For properties willing to install one or more High Power Wall Connectors in a prominent location, Tesla may be willing to offer discounted equipment.
