

Update Succeeded - What's New in Release v6.0

Other Maps/Navigation Improvements

- Improved traffic display with route line: Yellow and red traffic lines are now rendered on top of the route line, making traffic easier to see. Green traffic lines are no longer displayed above the route line.
- In full screen, the turn list shows more of the turns ahead.
- The turn list is now more concise. Repeated consecutive slight turns that keep you on the same road are combined into one instruction.
- Favorites: For vehicles that are not equipped with the Navigation option, you can store frequently used locations to a "Favorites" list under "Places." To mark a destination as a Favorite, select its "pin" (from search results or "Recents"), and then tap the heart icon.
- The MAP MAGNIFICATION option in the Maps & Navigation settings has been removed.
- Updated navigation maps: New maps will be available for your navigation system soon. Your car must be connected to a Wi-Fi network to receive the maps. You'll be notified with an on-screen message once the maps have installed. Map updates will start rolling out gradually after Release v6.0 is launched.
