

To whom it may concern,

Tesla Model 3 is fitted with an anti-theft approved to the requirements in UNECE Regulation No. 116.00 (Uniform technical prescriptions concerning the protection of motor vehicles against unauthorized use)

UNECE R116 Approval Number: **E9*116LAI00/05*1274*00**

Description of the system:

Immobilizer

System is capable of checking for authorized key and performing a cryptographic exchange with the powertrain. Inadvertent activations are protected against by the use of strong cryptographic protocols, hardware security modules, and smart timeout and retry limitations.

Alarm

Sensors fitted to each passenger door, the bonnet and tailgate that sounds the alarm sounder when they are opened.

Model 3 security package includes following systems:

- Intrusion sensor: Detects movement inside the passenger compartment or an intruder reaching in through a front window and will sound the alarm.
- Tilt sensor: Detects if the vehicle is being lifted onto a tow truck and sounds the alarm.
- Battery Backed Sounder: Additional alarm sounder with its own power supply so will continue to function even if the vehicle 12V power is cut off.

A handwritten signature in black ink, reading "Suraj Nagaraj".
